TTC Transmissions Minor Rebuild Kits

The DT Components product line has expanded to include minor rebuild kits for TTC transmissions. The minor rebuild kits contain all of the bearings, seals and gaskets found in the DT Components standard kits along with the necessary shims, snap rings and shift fork inserts to complete the rebuild. These kits provide rebuilders a superior value by containing premium or OE equivalent bearings along with miscellaneous accessories. Please contact your sales representative for additional information along with pricing for kits and individual components.
